How to operate the Huawei E5730s 3G/Ethernet/Wifi router

Scenario 1: Accessing the internet using a WCDMA or GSM network

Mobile WiFi supports WCDMA and GSM networks. After inserting a USIM card into your mobile WiFi device, you
can access the internet in any of the following ways:

> Roaming may incur data usage fees. To minimize your data usage, your mobile WiFi's data roaming
> function is disabled by default. When your mobile WiFi connects to a roaming network, your data
> connection will be disconnected. To re-establish the data connection, log in to the web management
> page.

WiFi connection – wirelessly connect your mobile WiFi to other WiFi devices.
