

Servo 180 dg

[ku1jFvoGLZZNdNBg11.png](#)

The **iTriangle - Servo** is DC motor with gears and a feedback system. It can be used in robot driving mechanisms. The module is a bonus product for iTriangle lovers. We have added a standard iTriangle standard to the three-wire servo. You can now plug and play the motor as any typical iTriangle module without any interference from jumper wires.

If you prefer a proto servo, see the EMAX 9g ES08A High Sensitive Mini Servo. They are the same model and both of good quality with a low price.

Features

- Small size
- iTriangle compatible interface
- Easy to use

Specifications

Item	Min	Typical	Max	Unit
Working Voltage	4.8	5.0	6.0	V
Torque	1.5/1.8			Kg.cm
Speed	0.12/0.16			s/60°
Size	32 x 11.5 x 24			mm
Weight	8.5			g
